

The matrices prefixed with “Delaunay” from the Florida Sparse Matrix group (<https://www.cise.ufl.edu/research/sparse/matrices/>) were tested on Vulcan in both weak and strong scaling studies. The weak scaling studies were performed with approximately 10,000 degrees-of-freedom per process. The strong scaling study was performed on delaunay_n_22_k101, a matrix with approximately 4,000,000 rows and 25,000,000 nonzeros.
